

I support RM-10867. This is the very best plan of all plans proposed to date. It covers all the important aspects needed for the successful transition of new license classes and will contribute to the continual growth of amateur radio. Any plan short of this proposal leaves the door open for contention by numerous self-serving groups of individuals who would, in all probability, like to limit Ham radio to an elite group who do not contribute any more to the hobby, technology, or to the public good. The FCC has a great opportunity before it by the passage of this petition.
